EDUCATION

North Carolina State University, Raleigh, North Carolina May 2010

Ph.D., Economics

Dissertation: *Determinants of the Allocation of the Conservation Reserve Program and Landowners' Enrollment Decisions*

Advisors: Walter N. Thurman, Michele C. Marra, Daniel J. Phaneuf, and Andrew J. Taylor

Coe College, Cedar Rapids, Iowa May 1996

B.A., Economics and Business Administration, with Honors

Department Honors Thesis: *An Empirical Analysis of Okun's Law and the Phillis Curve by Demographic Groups: Implications for Macroeconomic Policy in the United States*

FIELDS OF INTEREST

Agricultural Economics, Agribusiness Management, Agricultural Production, Agricultural Policy

PROFESSIONAL EXPERIENCE

Assistant Professor of Economics, Extension Economist Aug 2012 – present
Iowa Institute for Cooperatives Economics Professorship
Department of Economics, Iowa State University, Ames, Iowa

Assistant Professor of Economics
Department of Economics, Iowa State University, Ames, Iowa Jan 2010 – Aug 2012

Graduate Research Assistant
Graduate Program in Economics, North Carolina State University, Raleigh, North Carolina Aug 2003 – Dec 2009

DESCRIPTION OF ACADEMIC ACTIVITIES

Extension Programming for Cooperatives and Applied Research

I develop and deliver extension programming to address both emerging and persistent needs of Iowa's cooperatives. My programming is characterized by three broad areas: capacity in human capital, firm and sector financial analysis, and structural changes in the agriculture industry.

A significant portion of my extension efforts are directed toward building capacity in individuals that will serve cooperatives today and in the future. I engage with cooperative directors, managers, and employees through small-group meetings, facilitated discussions, and presentations at regular annual program offerings of the Iowa Institute for Cooperatives (IIC) and Nebraska Cooperative Council (NCC). These state councils' educational offerings are an important platform through which to engage with cooperatives, and the annual offerings in which I participate include: **Director Certification Program** (DCP is a 4-day program conducted in Iowa and Nebraska in January), **Board Presidents Workshop** (Iowa; March), **Board Officers Workshop** (Iowa; July), and **Mid-Managers Workshop** (Iowa; December). Other workshops, such as **Winter Workshop** (Iowa; January) and **Summer Workshop** (Iowa; June) provide an opportunity to share new applied research relevant to cooperatives. The workshops and educational offerings are a critical component in director development for cooperatives, and boards and managers utilize these programs to develop the business acumen and industry expertise to make informed decisions and effectively lead their organizations.

In 2018, a collaborative effort led by NCC resulted in a new offering for cooperative directors: **Advanced Director Training** (Nebraska: January). ADT is a one-day program for directors who have completed the basic DCP, and want advanced training and insights. I coordinated with CoBank to lead training and discussions related to strategic financial management.

In 2016, I led a collaborative effort with IIC to develop and host the first **Iowa Cooperative Intern Day** (Iowa; summer), offering cooperative interns and staff an opportunity to learn about the cooperative business model and network with industry leaders as they consider their career options. The workshop is set to continue.

My research and extension programming are synergistic and concentrated in the areas of firm financial performance and structural changes in the agricultural market. Through cooperatively provided data, I provide financial analysis of local cooperatives and firm-level comparisons to understand trends in performance of Iowa's cooperatives. Tools to understand the financial implications of firm-specific decisions and internal and external risks are developed and shared with cooperative board members, managers, and agribusiness partners. This type of programming benefits from and is the platform for applied research in the agribusiness performance.

Finally, my applied research in the evolving market structure of the agricultural supply chain forms the basis for new programming to aid Iowa's cooperatives as they consider their role in and response to market consolidation and the potential for market power among various participants. Ag and food policy considerations dovetail with this work.

Teaching and Mentoring

Undergraduate Teaching Econ 332 Cooperatives: an elective undergraduate economics course that provides in which student explore in-depth the cooperative business structure. Major topics include the economic justification of cooperatives, their unique governance and ownership structure, and the financial and challenges they face as a result of their formal organization. Students are given the opportunity to work with a cooperative of their choosing to investigate all aspects of the cooperative, including governance, management, history, member value, financial performance, and challenges.

Graduate Student Mentoring Industry support, competitive federal grants, and other funding supports graduate students interested in pursuing careers and research related to cooperatives and agriculture. Students present their research on cooperative finance, producer investments, and production decisions under uncertainty at professional meetings and publish in academic outlets. The resources in support of this position are integral in providing quality graduate experiences for our students.

Other Teaching Activities Promising undergraduate and graduate students with a demonstrated interest in careers at cooperatives or advanced studies related to cooperatives or agriculture work on applied projects, including financial performance and benchmarking, consolidation and merger studies, case studies, and more. These students are often invited to present at national conferences and competitions to showcase their work and interests.

Principal Investigator. “Optimal Nitrogen Usage under Uncertainty: Potential Implications of Nitrogen Use Reduction on Acres Available for Biomass Production.” \$37,500. Competitive contract awarded by the Biobased Industry Center, 2011 – 2012.

Co-Principal Investigator with J. Miranowski. “Cellulosic Biofuel Potential under Limited Land Use Change: Feedstock Supplies, Costs, and Locations.” \$37,500. Competitive contract awarded by the Biobased Industry Center, 2011 – 2012.

Other Financial Support

Iowa Institute for Cooperatives Economics Professorship, \$500,000

An endowment from the cooperatives in Iowa to the College of Agriculture and Life Sciences, the proceeds from which support my extension, research, and teaching related to cooperatives. I leverage this gift to develop and delivery programming for cooperatives and provide experiential and research opportunities for graduate and undergraduate students. Funded 2013.

CoBank Fund for Excellence in Cooperatives Economics, \$250,000

A five-year gift to support extension, research and teaching initiatives related to cooperatives. Funded September 2013.

Barbara and Thomas Lyon Scholarship for Study of Agricultural Cooperatives, \$70,000

A gift to the Department of Economics provides an annual scholarship to a graduate student with an expressed interest in studying or pursuing a career in cooperative business enterprises. Funded May 2012.
